Perfect **INSTALLATION**

All miniBar - miniRefrigerators can be integrated into suitable furniture. But it is important to provide appropriate ventilation. The air intake and exhaust openings must be at least 300 cm² each. It is essential to make sure that the ventilation screen cannot be closed or covered.

IMPORTANT: Absorption system miniBars do not function optimally if the room temperature over 32°C. The ideal room temperature is between 20°C - 25°C.

Correct Installations

INVERTER MINIBARS

Since it is an inverter compressor, **it reduces the minibar electricity costs by 90%**. Inverter compressor minibars work with 26-29 dB sound level and provide much better cooling in hot outdoor environments compared to absorption system minibars.

Absorption System

Absorption minibars are noiseless and vibrationless minibars which is the biggest reason that they are preferred by the hotels and hospitals. In this system, there is no mechanical equipment is used so it is completely silent and vibration free. Absorption system minibars can cool between +4 to +14 degrees at ambient temperatures of +16 to +32 degrees.

The cooling performance is calculated with DELTA-T constant value. DELTA-T (20 C) value is subtracted from the ambient temperature to find the cooling performance. For this reason, if the minibar is to be used in the cabin or furniture, the cabin ventilation must be planned properly.

Inverter System

The inverter compressor system minibars works with a BLDC motor and it has an algorithm that detects the need for cooling. The biggest advantage of this system is its very low electricity consumption. This system has A+++ energy label. Inverter system minibars provide 90% less electricity consumption than Absorption system minibars. The compressor makes 26 dB noise during start-stops, which is a very low level of noise and accepted by hotels. Customers are not disturbed in any way as the minibar enters sleep mode at night. Inverter system minibars mostly preferred in hot places because it can cool +2 to +8 degrees even it is 43 degrees outside.

HOTEL **SAFES**

Hotel safes provide best protection against the threat of unforeseeable burglary attack. They are built to accommodate the most commonly stored items with ease, such as laptops, hard drives & jewellery.

Features

- Installed into a drawer with a damper lid.
- Able to work with 3-6 digit user code.
- Possibility of opening the safe with 6 digits master code.
- When the batteries run out, it is possible to open the safe with emergency unit (CEU) or with mechanical passkey from the outside.
- Digital display to see battery level.
- 15 min. self-blocking after 4 wrong operation (Fine mode can be disabled).
- Fine mode can be adjusted as 15, 30, 45 and 60 minutes.
- Low battery consumption with servo motor.
- Works with 4 x 1,5V alkaline battery.
- Possibility of hiring out the safe with a magnetic switch (Optional).
- The last 100 operation can be printed out only in 1220 models (process, time, date, password).
- Optional plug and cable connection inside the safe (Especially for laptop size safes)
- Motion-sensor lighting system is available inside the safe (Optional).
- Electrostatic powder paint with different color options.
